

# Diabetic Retinopathy Detection & Classification using Deep Learning

by Amin Zouaoui for Jedha Bootcamp

# DIABETES AROUND THE WORLD IN 2021

**537**

**million**

Adults are living  
with diabetes in the world

**100**

**Percent**

Are at risk and need to be  
screening once a year

**1**

**First**

Fastest growing  
cause of blindness

# DIABETIC RETINOPATHY DIAGNOSIS

**HEALTHY**

Hemorrhages

**DISEASED**

0 - No DR

1 - Mild DR

2 - Moderate DR

3 - Severe DR

4 - Proliferative DR

**ARTIFICIAL INTELLIGENCE RESULTS**

**STREAMLIT**

# DEEP LEARNING MODEL DESCRIPTION

## INPUT

Kaggle Data Set  
3662 images &  
CSV with labelled images id

## MODEL

Deep Learning CNN  
16 Layers  
32 Million Parameters

0 - No DR
1 - Mild DR
2 - Moderate DR
3 - Severe DR
4 - Proliferative DR

## OUTPUT

Detection & Diagnosis  
Classification

## WHAT'S NEXT ?

- Get a bigger data set
- Enhance the preprocessing on images
- Improve the model accuracy by using transfer learning
- Display the areas where the model detected DR
- Extend the model to the diagnosis of other diseases

**THANK YOU!**
